#### MICIATURIZATION

The appearance of the equipment is more compact, the floor area is reduced and the transportation cost is reduced. It has comprehensively iterated in optics, electricity, control software and appearance, and the advantages of small batch manufacturing are more prominent. Integrated structure, high stability. The parts are integrated and optimized to improve stability, durability and service life.

#### INTELLECTUALIZATION

The world's first Linux control system adopts DLC variable laser power control scheme, which has breakthrough productivity. The intelligent variable spot variable power high-speed scanning system improves the printing speed by 20% ~ 100%. The molded parts have extreme details and smooth surface quality.

#### TRUE TO CAD ACCURACY AND SURFACE FINISH

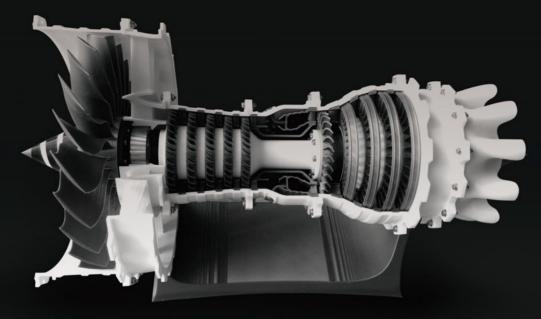

Equipped with fast and intuitive printer interface software, and a galvanometer optical system by ScanLab Germany, the SLA800 displays top scanning speeds and enhances production efficiency significantly. Surface roughness as low as 0.05 µm makes post-processing simple and efficient.

#### **WIDE CHOICE OF MATERIALS**

A selection of over 10 different custom-designed printing materials with unique characteristics for functional prototypes and low-volume manufacturing.

#### MADE TO MEASURE CUSTOMIZATION

We offer a considerable selection of customizations free of charge. Available upgrades include autofocus, automatic material refilling, environment sensors, as well as remote diagnostics and control, ensuring you are industry 4.0 ready.
